

CIFA PART I SECTION 1
FINANCIAL MATHEMATICS

MONDAY: 20 May 2019.

Time Allowed: 3 hours.

Answer ALL questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

QUESTION ONE

- (a) Highlight four roles played by financial forecasting in a business. (4 marks)
- (b) A company has identified two investments which are mutually exclusive. The cash flow patterns for the investments are as provided below:

Year	Investment A Cash flow (Sh.)	Investment B Cash flow (Sh.)
0	(300,000)	(300,000)
1	90,000	90,000
2	90,000	60,000
3	90,000	50,000
4	90,000	40,000
5	90,000	30,000

The cost of capital for the company is 13%.

Required:

Using the net present value (NPV) method, advise the management of the company on which investment to be considered. (6 marks)

- (c) The consumer price index (CPI) for the years 2013-2018 are given as follows:

Year	2013	2014	2015	2016	2017	2018
CPI	138.6	142.8	148.3	152.4	156.6	160.3

Required:

The purchasing power of the Shilling for each of the six years. (6 marks)

- (d) A washing machine has a marked price of Sh.1,500,000. When the machine is bought on cash basis, a 8% cash discount is given.

The machine may also be bought on hire purchase terms, where 20% deposit is paid out. An interest of 30% is charged on the outstanding balance for the period of repayment.

The remaining balance plus the interest is payable in 24 equal monthly instalments.

Required:

The amount of money saved when the washing machine is bought on cash basis rather than hire purchase terms. (4 marks)
(Total: 20 marks)

QUESTION TWO

- (a) Explain four constraints that companies might face in making dividend decisions. (8 marks)

- (b) Using matrix algebra, solve the following simultaneous equations:

$$\begin{aligned} 3x + 2y &= 1,594 \\ 7x + 5y &= 3,810 \end{aligned}$$

(4 marks)

(c) An investor has two options of purchasing an equipment:

Option 1: Purchase equipment "X" costing Sh.281,250 whose net cash flow per year is Sh.75,000 for six years.

Option 2: Purchase equipment "Y" costing Sh.178,500 whose net cash flow per year is Sh.49,980 for six years.

The required rate of return for both equipments X and Y is 11 per cent.

Required:

(i) The net present value (NPV) for both equipments X and Y. (4 marks)

(ii) The internal rate of return (IRR) for both equipments X and Y. (4 marks)

(Total: 20 marks)

QUESTION THREE

(a) The following data relate to share prices of 1,000 companies listed in a regional stock market:

Share price (Sh.)	100-120	120-140	140-160	160-180	180-200	200-220	220-240
Number of companies	18	54	200	190	330	205	3

Required:

(i) The mean share price. (3 marks)

(ii) The mode of the data. (3 marks)

(iii) The standard deviation. (3 marks)

(b) The following are estimates of one-year returns from investing in the ordinary shares of Smart Limited:

Probability of occurrence	0.10	0.20	0.40	0.20	0.10
Possible share returns	-10%	5%	20%	35%	50%

Required:

(i) The expected return. (3 marks)

(ii) The standard deviation. (4 marks)

(iii) The probability that the expected return will be more than 40% using normal probability distribution. (4 marks)

(Total: 20 marks)

QUESTION FOUR

(a) An investment analyst collected data on shares of several companies and noted whether or not dividends were paid and whether or not the share increased in price over a given period of time. The following is a summary of the data:

	Price increase	No price increase
Dividends paid	51	117
No dividends paid	128	74

Required:

(i) A joint probability table. (3 marks)

(ii) If a share is selected at random, what is the probability that it increased in price? (2 marks)

(iii) Given that a share increased in price, what is the probability that no dividends were paid? (2 marks)

(iv) Given that a share had no dividends paid, what is the probability that there was no price increase? (2 marks)

(v) If a share is selected at random, what is the probability that dividends were paid? (2 marks)

(b) A project yields an average cash flow of Sh.750,000 with a standard deviation of Sh.90,000.

Required:

Determine the probability that the:

- (i) Cash flow will be more than Sh.840,000. (2 marks)
- (ii) Cash flow will be less than Sh.630,000. (2 marks)
- (iii) Cash flow will be between Sh.690,000 and Sh.810,000. (3 marks)
- (iv) Cash flow will be more than Sh.1,020,000. (2 marks)

(Total: 20 marks)

QUESTION FIVE

(a) Explain two challenges that might be faced in the valuation of ordinary shares. (4 marks)

(b) Minmax Limited has developed two functions to describe operations of the firm as follows:

$$\text{Marginal revenue (MR)} = 25 - 5q - 2q^2$$

$$\text{Marginal cost (MC)} = 15 - 2q - 2q^2$$

Where q is the level of output in thousands of units.

Required:

- (i) The profit maximising output in units. (3 marks)
 - (ii) The maximum profit in Shillings. (3 marks)
- (c) A borrower negotiates for a Sh.3,000,000 loan payable in 8 years from a financial institution. The term of the loan is at an interest rate of 14% per annum on a reducing balance with the principal amount being repaid in equal year end instalments.

Required:

An amortisation schedule for the loan showing interest and principal repayments.

(10 marks)
(Total: 20 marks)
